Special Report: Art Meets Architecture

artchitecture

Thanks to significant advances in computer modeling and integrated engineering, architects can now realize new dimensionality when conceiving grandiose edifices

LIGHT AS A FEATHER, STIFF AS A BOARD

Teragren Synergy Strand Bamboo Floating Floor is beautiful, durable and renewable. Available in Wheat, Chestnut, Java and the new Brindle—a blend of natural and caramelized bamboo strands—Synergy Floating Floor is the first wide-plank strand bamboo floating floor to feature the Välinge-patented, glueless self-locking system. The planks are created through a patented manufacturing process that fuses together bamboo strands with an environmentally safe adhesive. Teragren's latest innovation is perfect for multifamily, civic and public settings from traditional to contemporary. The flooring is engineered with a 4-mm top wear layer of Optimum 5.5. moso-strand bamboo and mounted on a cross-ply 100% bamboo core for extra stability. It may be floated anywhere, in locations such as the home or office—including below-grade areas like basements where moisture is more likely to be present. Visit www.teragren.com or Circle (500)
