Breathe Right with Teragren Bamboo Floors

With all of the emphasis on environmentally friendly products and green design practices, designers are, more than ever, looking for materials that can help them achieve that goal. And we know your clients, the homeowners, are asking for it. But it's not just about being sustainable; it's about being healthy and promoting a clean environment in which to live. With that in mind, here's something to consider:

Teragren recently announced that select bamboo flooring lines now qualify for FloorScore certification through Scientific Certification Systems (SCS), a global leader in independent certification of environmental and sustainability claims. FloorScore sets tough limits for safe indoor air emissions, guaranteeing that certified products contribute to a healthier and safer indoor environment. Teragren is the world's first and only company to offer FloorScore-certified bamboo flooring.

Teragren's new FloorScore certification applies to products featured within the company's most popular lines of renewable bamboo flooring, including:

- Synergy Strand Solid-Strip and Synergy Wide-plank Bamboo Floating Floor, both made with Xcora technology
- Teragren's Traditional Bamboo Flooring (Signature Naturals, Craftsman II & Studio)
- Teragren's Unfinished Bamboo Flooring, manufactured using Teragren's proprietary No Added Formaldehyde (NAF) adhesive
- Teragren's matching Bamboo Stair Components and Bamboo Flooring Accessories

"Teragren is committed to pioneering environmental standards within the bamboo industry—including preventing indoor air toxins," said Teragren President and CEO, David Knight. "Our customers can breathe easier knowing that Teragren's FloorScore-certified bamboo flooring contributes to healthier home, work and school environments."
