WHO BELIEVES IN CLIMATE CHANGE?

34% I'm not sure that global warming is caused by man, but energy conservation makes economic sense if we'll be less dependent on other countries' oil (308 responses)

13% Global warming is a myth perpetuated by the media, and green building is a fad—it'll be forgotten in 20 years' time (116 responses)

46% It's vital that we design and build sustainably, in order to conserve scarce resources and prevent further global warming (419 responses)

7% I'm not sure that building green in the U.S. will help the environment when China and India are becoming industrialized so rapidly (61 responses)

Available in three styles, the new **bamboo tabletops and countertops** from **Teragren** provide a sustainable surface for retail and hospitality applications. Strand countertops feature a chestnut face with a vertical-grain core (above), while the End-Grain Strand variety is available in wheat or chestnut with a burl-like pattern. Both Strand options are engineered using Xcora technology, making them 154 percent harder than red oak. The Traditional countertop features a vertical-grain face with a bacteria-resistant, formaldehyde-free surface. • teragren.com • Circle 104
