Recycled Glass & Concrete (Icestone)

When remodeling your home it is important to find ways that make your carbon footprint a little smaller. The kitchen is one of the most used places in your home. Many people pay attention to flooring and cabinets, but your countertop should hold just as much importance. In the article, "Green and Gorgeous Remodeling: Eco-Friendly Countertops" [The Daily Green](#) provides us with ways to incorporate recycled materials into our space.

"IceStone is made from 100% recycled glass that is mixed with cement to create a highly durable, aesthetically beautiful and green concrete surface. For countertops, table tops, floors, or wall coverings, IceStone's versatility of color and finish offers exceptional design options, unparalleled durability, and sustainability."

Construction Waste & Recycled Plastic (3form)

If you have ever been worried about what does to landfills, this is your countertop. **3form** countertops use recycled plastics that are commonly found in landfills. No worries, its safe and sanitary.

Bamboo (Teragren)

Bamboo countertops are durable, renewable and sustainable countertops. **Teragren** offers a wonderful bamboo countertop series that captures its natural beauty while featuring its best qualities.

Recycled Paper (Paperstone)

Ever think you could have a countertop made of paper? **Paperstone** offers countertops made of 100% postconsumer paper waste. Yes paper! Covered with a natural resin, these blocks of paper are strong and durable.
